

World Bank GovTech Innovation Challenge 2026

GovTech Readiness Brief — District Health Intelligence

Monitoring for matching challenges · ready PoC partner when health calls open

Your health, our mission.

Health for All — Obulamu eri Bonna · Afya kwa Wote · Oburamu bwa Boona

Challenge deadlines vary — we submit only for health / Africa-aligned use cases

1. Readiness brief summary

The World Bank GovTech Innovation Challenge connects technology companies with government digitalisation needs — offering capacity building, a Switzerland bootcamp, and proof-of-concept work with government partners.

FairBanks maintains this readiness brief because current open challenges may focus elsewhere (for example public-finance audit use cases in Morocco). We do not pretend those are our target. When a health or Africa-aligned challenge appears, we can move fast with a district health intelligence proof-of-concept rooted in live operations.

2. How we monitor GovTech challenges

We review World Bank GovTech challenge pages weekly. We track new calls for district health, community data, CHW systems, or African government digitalisation partners.

We submit tailored proposals only when the use case matches — protecting evaluator time and our own credibility. This pack is a baseline, not a blind submission to unrelated audit challenges.

3. District health intelligence PoC pattern

FCHIP offers a GovTech-ready pattern: secure community capture on offline-capable mobile tools; cloud sync and validation; analytics and GIS hotspot views; role-based dashboards co-designed with district health managers; configurable early-warning alerts aligned to local protocols.

The PoC measures decision-cycle gains — how fast managers see coverage gaps, respond to signals, and improve CHW data quality for government reporting.

4. What we are not applying for

Open Moroccan public-finance audit challenges are not FairBanks' domain. We will not repurpose a community health narrative to fit unrelated audit software requirements.

Our value is district health intelligence from an operator that already runs clinic and community programmes — not a generic vendor stretching into every challenge category.

5. FCHIP architecture for government partners

FairBanks Community Health Intelligence Platform sits on the community cascade: members identify needs; CHWs/VHTs bridge homes to care; outreach programmes deliver services; the medical centre provides clinical care; research and partnerships strengthen the system; livelihoods make gains last.

For government partners, FCHIP complements national systems — feeding cleaner CHW data, early warnings, and facility decision support without replacing existing EMR or DHIS2 investments where interoperability is preferred.

6. PoC components

Component	Function
Community capture	Offline CHW/VHT forms with validation rules
Data pipeline	Secure sync, anonymisation, and quality dashboards
GIS layer	Hotspot maps for managers and partners
Alerts	Configurable early warnings aligned to local protocols
Handover	Documentation and training for sustained use

7. Monitor → match → co-design plan

Step	Action
Weekly	Scan GovTech challenge pages for health / Africa digital-government calls
Match gate	Submit only when use case aligns with district health intelligence PoC
If selected	Attend capacity building / Switzerland bootcamp as offered
Co-design	Work with government partner on scoped PoC and success metrics
Measure	Track decision-cycle time, data quality, and manager usability

9. Mutual value

FairBanks gains: Government PoC pathways; World Bank / SECO ecosystem visibility; learning that hardens FCHIP for public-sector deployment; bootcamp access if selected.

GovTech programme gains: Vendor that runs clinic and community operations — not only software; health intelligence use cases governments need; African implementer ready for co-design; reusable PoC patterns for district health offices.

10. Readiness statement

We ask to be considered for matching health and Africa digital-government challenges as they appear.

Your health, our mission.
