Hiring Team

Agromavericks

Kampala, Uganda

Subject: Application for Full Stack Software Developer (Ref: AM-2026-1407)

Dear Hiring Team,

I am applying for the Full Stack Software Developer role at Agromavericks (AM-2026-1407). I build and ship web and mobile products end to end, and I want to bring that ownership to your in-house technology team as you take full control of the Agromavericks and Ukofi platforms.

My strongest overlap with your stack is Next.js / React, React Native, TypeScript and JavaScript, Node/Express-style APIs, MySQL/SQL with Prisma, and cloud work on AWS and Azure. I currently lead FCHIP software at FairBanks Medical Centre — including AI/ML features, hospital management workflows, and production AI agents (one live deployment for a law firm in Texas). Earlier I helped deliver Shulekeeper (Next.js, TypeScript, Laravel, AWS), led endoscopy reporting software for two hospitals, and built the Wekebere Android + embedded monitoring product.

I have not yet used Convex, Better Auth, Bunny.net, or EAS in production. I learn stacks quickly, and I am ready to adopt your real-time backend, auth, CDN, and mobile release pipeline with guidance from your Tech Lead and current partners. What I already bring is secure, practical delivery habits; experience integrating systems used by real operators; and comfort owning architecture across frontend, backend, data, and integrations.

Agromavericks stands out because you are a technology company solving a Uganda- and Africa-relevant financing problem for farmers and financiers. I am based in Kampala, legally authorised to work in Uganda, and interested in your hybrid model. I would welcome a conversation about how I can help you own and grow the platform.

I have attached my CV. Thank you for your time — I look forward to your reply.

Yours sincerely,

Wasswa Wilson

Full-Stack Software Developer
