

AFRICA HEALTH-TECH ACCELERATOR 2026

FairBanks Community Health Intelligence Platform (FCHIP)

Working MVP. Community signals. Predictive insight. Timely action.

Your health, our mission.

Uganda | MVP | July 2026

Care reacts too late

Community data exists, but it rarely becomes timely action.

- Outreach, maternal, pharmacy, and facility signals remain fragmented.
- Clinical records often stay locked inside existing EMR/HMS systems.
- High-risk pregnancies and chronic conditions are found late.
- Districts and clinics lack a live view of community risk.
- Medicine and outreach plans rely on delayed or incomplete data.

The gap is not data collection alone. It is intelligence and follow-through.

FCHIP turns signals into action

An offline-capable intelligence layer for community primary care.

1

Capture

CHW/VHT plus secure EMR/HMS APIs

2

Understand

Risk rules, analytics, and GIS

3

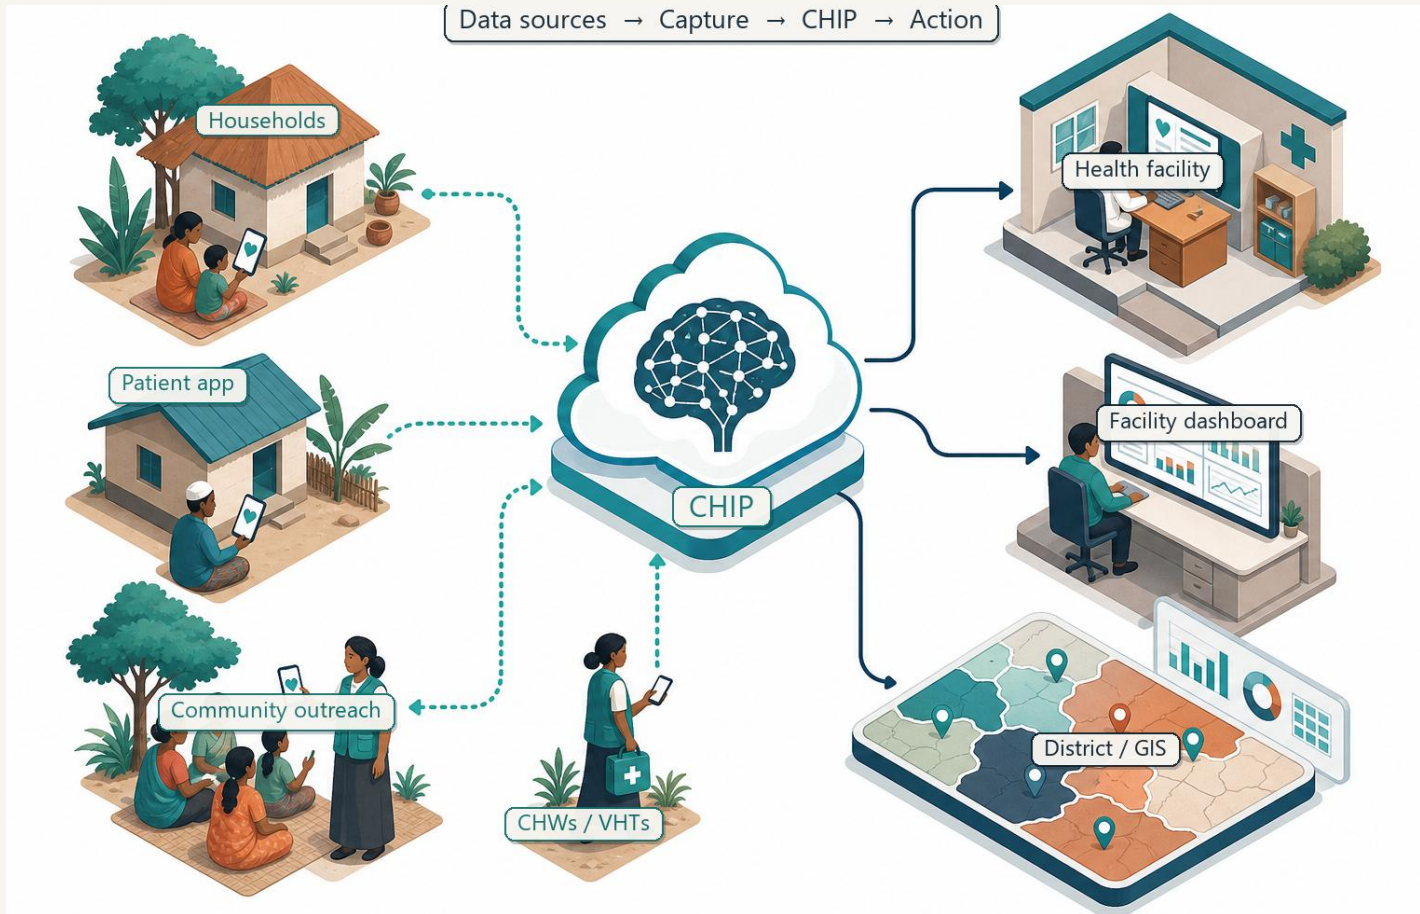

Act

Alerts, referrals, and outreach

Designed for low-connectivity workflows

Simple at the frontline; disciplined and secure behind the scenes.

Offline mobile

Structured visits and referrals

EMR/HMS APIs

Real-time clinical data, safely

Secure pipeline

Consent, validation, role access

AI + GIS dashboards

Explainable risk and action

Start focused. Prove value.

Three live MVP workflows with clear users and actions.

1

Maternal risk

Flag missed ANC, high BP, and referral urgency.

2

NCD hotspots

Map BP/glucose patterns and target screening.

3

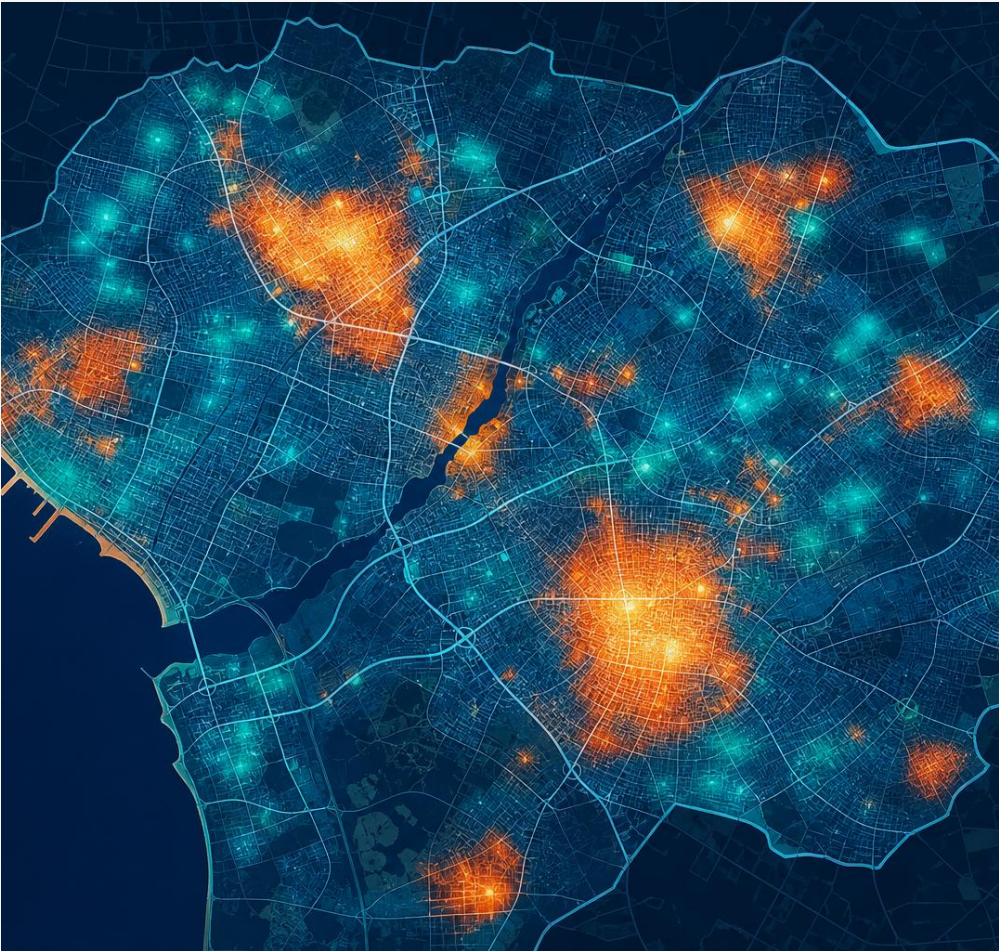

Disease surveillance

Detect rising symptom clusters and coordinate response.

A shared platform for the primary-care stack

Frontline users act; institutions buy.

Clinics	Follow-up, outreach, population visibility
Districts & MoH	Early warning, planning, and national oversight
Health federations	Network coordination and shared standards
NGOs	Programme monitoring and evidence
Universities	Teaching, research, and ethical study analytics
Insurers	Prevention-focused population insight

Diversified revenue, one intelligence core

Recurring software plus implementation and partnership services.

Subscriptions

Clinics and hospitals

Deployments

Districts and ministries

Contracts

NGO monitoring and reporting

Integrations

Secure EMR/HMS APIs and partners

Training

CHW onboarding and implementation

Research

Approved study and analytics support

Beachhead: FairBanks catchment -> Kampala partners -> Uganda districts -> East Africa

A real environment to validate health-tech

Field access, care delivery, and community trust reduce pilot friction.

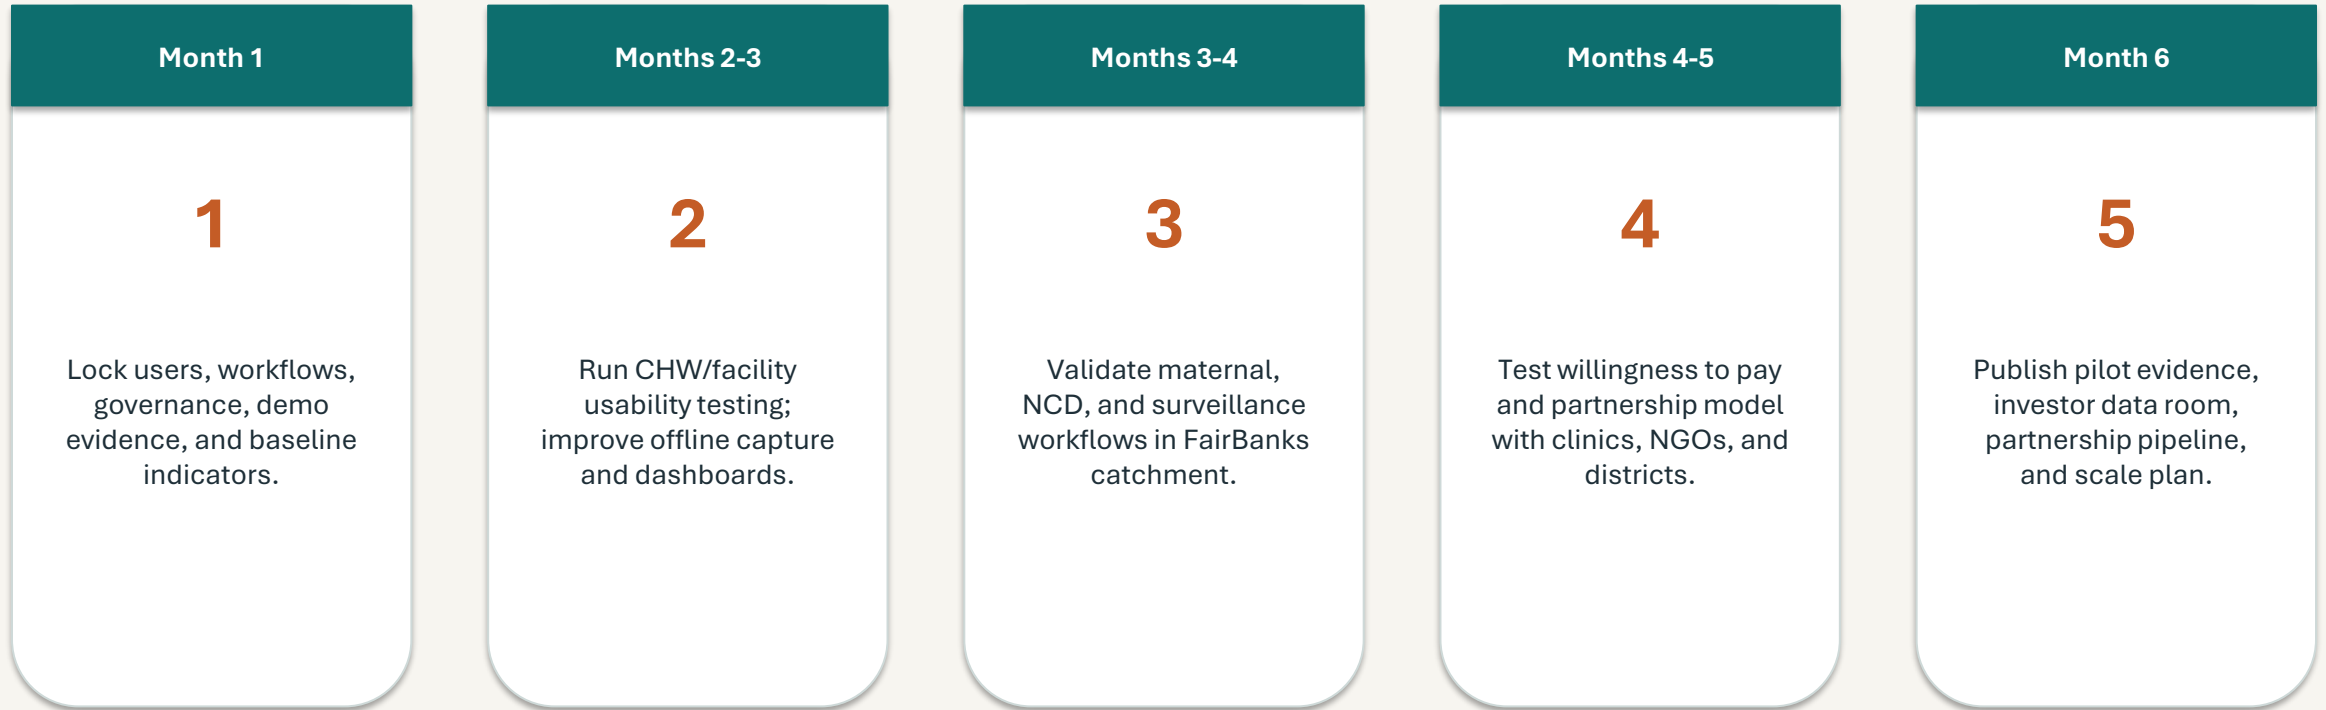

- Functioning medical centre
- Community Reach programmes
- CHW and VHT links
- Maternal, NCD, geriatric, school, and corporate health workflows
- Digital records and pharmacy signals

Six months to product-market evidence

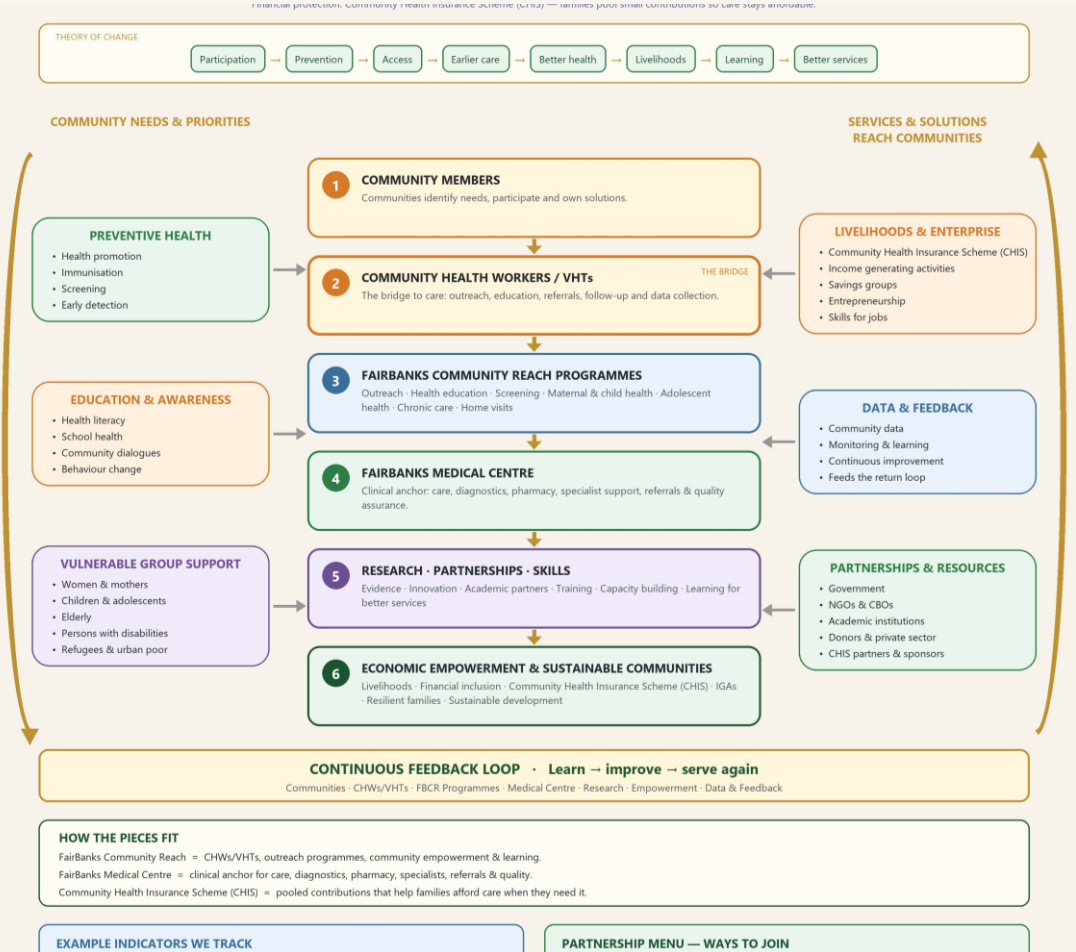

Working MVP now. Next: validate fit, buyers, and partners.

Outcome: usable evidence for buyers, partners, and Demo Day.

Built for pan-African adaptation

Standard core; configurable workflows, language, and integrations.

1. Validate

FairBanks catchment with working MVP

2. Replicate

Partner clinics and programmes

3. Integrate

District and national systems

4. Expand

East African CHW markets

Operating care. Working MVP. Ready to validate at scale.

FairBanks already runs the cascade FCHIP is built to digitise.

VALIDATION ADVANTAGE

- Working FCHIP MVP with demo-ready workflows
- Secure EMR/HMS data APIs for real-time clinical ingest
- Clear six-month product-market validation plan
- Accelerator fit: mentorship, networks, and Demo Day readiness
- Buyer evidence path for clinics, districts, and NGO partners
- Uganda beachhead ready to expand across East Africa

THE ASK

Help a working MVP become validated African scale.

1

Validation and market research

2

Product and UX iteration on the MVP

3

Partnerships and ecosystem access

Your health, our mission.
