

Learning Plan & Gender-Responsive AI Project

FairBanks Community Health Intelligence Platform (FCHIP)

Maternal and adolescent health intelligence — built with communities, not on them

Your health, our mission.

1. Why this school fits my work

AI in health fails women and girls when models skip community voice. FairBanks maternal and adolescent programmes are the right place to test gender-responsive AI honestly.

The Young Feminist AI School offers feminist ethics, inclusive design, and peer accountability.

2. My learning plan

Foundations of feminist AI: Bias in health datasets; who is missing from training data; participatory design with women and girls.

Responsible ML for community health: Explainable alerts, consent, and offline-first capture for CHWs in low-bandwidth settings.

Gender-responsive product design: Interfaces and workflows that work for mothers, adolescents, and CHWs — not only engineers.

Policy & advocacy: Translating model outputs into action without stigmatising vulnerable groups.

3. Gender-responsive AI project

Safe Signals — explainable alerts for missed ANC/anaemia patterns and adolescent SRH education gaps.

Co-design with mothers and adolescents; CHW-led follow-up; no public individual labelling.

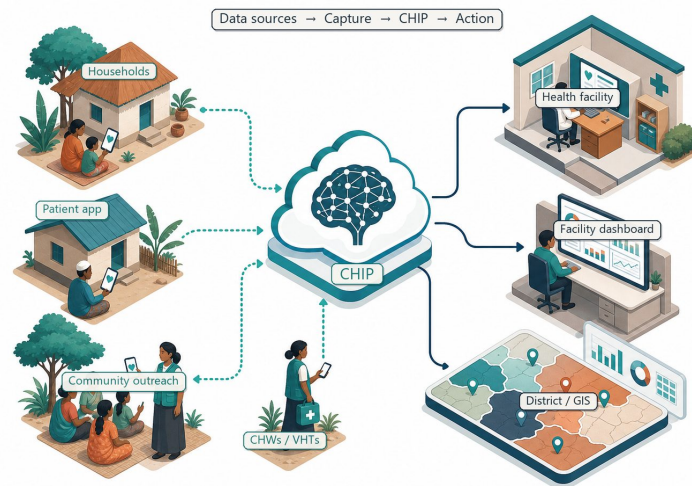

Discover: Co-design with adolescent girls and mothers in FairBanks outreach — what questions are safe and useful?

Prototype: Lightweight risk flags for missed ANC and adolescent SRH education gaps using anonymised community signals.

Validate: Compare alerts against clinical outcomes and CHW feedback; document bias checks and corrections.

Share back: Open learning brief for UN Women cohort — methods, failures, and ethical guardrails.

4. FCHIP as the field laboratory

Live outreach and CHW networks · Auditable dashboards · Human care always central

5. Ethics commitments

Community advisory before outreach messaging changes

Transparent documentation of model limits for the cohort

Uganda Data Protection alignment

6. Learning together

UN Women cohort gains: A real HealthTech field site with maternal and adolescent programmes; Documented gender-responsive AI design process from Uganda; Case material linking feminist AI principles to community health

FairBanks gains: Structured feminist AI curriculum and peer changemakers; Mentorship on bias, safety, and inclusive model design; Continental network to stress-test FCHIP ethics and narrative

Your health, our mission.
