

GirlCode Hackathon 2026 — Kampala

Challenge Brief & Mentorship Offer

FCHIP — 30-hour build sprint · UICT Nakawa · 5–6 September 2026

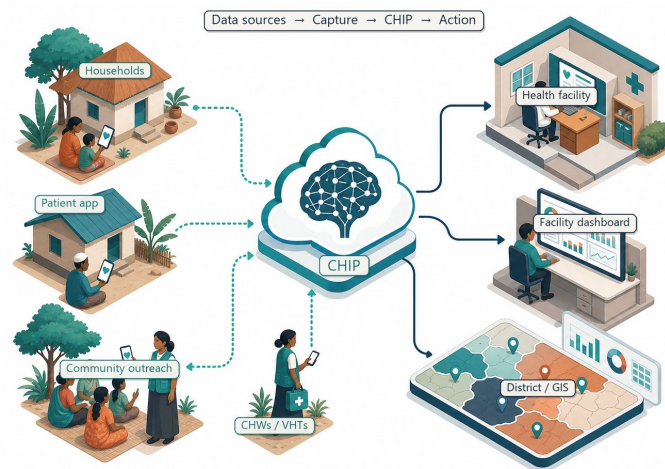

Your health, our mission.

UICT Nakawa Campus, New Portbell Road, Kampala

1. To Kampala builders

FairBanks offers three FCHIP challenge tracks and mentorship because the best MVPs come from teams who understand users on the ground.

FCHIP — community intelligence stack

Challenge A: Maternal risk early warning

Problem: High-risk pregnancies are often found late. Can your team turn outreach-style signals (missed ANC, BP patterns, anaemia proxies) into timely CHW alerts?

Stretch: Explainable scores · offline-first · no stigma

Challenge B: Adolescent SRH companion

Problem: Adolescents need private, trusted SRH information and referral paths. Build a lightweight companion that works with school and community outreach — not against parents and CHWs.

Stretch: Local languages · consent · safe escalation to FairBanks outreach

Challenge C: Outbreak early signal

Problem: When fever reports rise across neighbouring villages, clinics react too late. Can you cluster community reports and flag a possible surge before the pharmacy runs dry?

Stretch: GIS view · simple rules + optional ML · stock-out prevention

Mentorship offer

- FairBanks clinicians and outreach leads on realistic workflows
- Sample (anonymised) data schemas from CHW capture — not raw patient records
- Office hours during the hackathon on UX for low-literacy and offline settings
- Path to continue building with FairBanks if your MVP wins locally or regionally

What teams gain

- Real community health problem statements grounded in Kampala outreach
- Mentorship from an operating medical centre — not a fictional case study
- Portfolio project with social impact narrative for jobs and investors
- Visibility with FairBanks partners in maternal, adolescent, and NCD work

Your health, our mission.
