

IFAD Grant — Rural Sector Performance Assessment (up to US\$1.2M)

Concept Note — Health–Livelihood Intelligence for Rural Policy

FairBanks Community Health Intelligence Platform (FCHIP)

Linking community health signals to rural development performance and investment

Your health, our mission.

Health for All — Obulamu eri Bonna · Afya kwa Wote · Oburamu bwa Boona

Optional non-binding Expression of Interest by 31 July 2026 · Full proposal by 4 September 2026 (12:00 CET)

1. Concept note summary

IFAD seeks proposals up to US\$1.2M to leverage the Rural Sector Performance Assessment for better policy and investment — open to non-profits, private firms, universities, and think tanks.

FairBanks' cascade already links health to livelihoods and resilient families. FCHIP can contribute community health and vulnerability signals that make rural performance assessment more human-centred. This pack frames a careful, partnership-ready fit — to be confirmed against IFAD's detailed thematic guidance before full proposal effort.

2. Thematic fit verification

We treat thematic alignment as a gate, not an assumption. Before investing full proposal effort, FairBanks will submit an optional Expression of Interest (31 July 2026) and review IFAD's detailed guidance against our proposed health–livelihood indicators.

If official guidance confirms fit, we proceed to a full proposal by 4 September 2026. If not, we will not stretch the narrative beyond what the call supports — protecting evaluator time and our own integrity.

3. Health shocks and rural livelihoods

Rural policy often tracks production and infrastructure while under-weighting health shocks that wipe out household gains. A fever outbreak, a complicated pregnancy, or untreated hypertension can erase months of farm income and push families into debt.

Without community health intelligence, rural performance assessments miss a core driver of poverty. FairBanks sees this daily through outreach in peri-urban and rural-facing catchments around Kampala and partner communities.

4. FCHIP contribution to rural performance assessment

We propose a workstream where FCHIP community indicators — illness clusters, maternal risk, missed care, medicine stock-outs — inform rural performance dashboards and policy briefs, co-designed with research institutes and IFAD partners.

The FairBanks cascade connects community members, CHWs/VHTs, outreach programmes, clinical care, research partnerships, and economic empowerment. FCHIP is the intelligence layer that makes health–livelihood linkages visible to policymakers.

5. Partnership and counterpart model

FairBanks brings field operations, CHW networks, and data stewardship. We expect to partner with a university or think tank for rigorous assessment design, ethics review, and policy writing.

IFAD requires 20–25% counterpart contribution. FairBanks will meet this through in-kind field operations, staff time, outreach infrastructure, and existing digital health foundations — not as a cash substitute for core research costs.

6. Proposed workstreams

- Health-shock markers linked to livelihood stress in rural performance dashboards
- Community-generated indicators from CHW outreach and clinic encounters
- Policy briefs translating FCHIP signals into rural investment priorities
- Partner-led evaluation design with academic / think-tank co-authorship

7. Pathway — EOI to policy learning

Step	Action
By 31 Jul 2026	Optional non-binding Expression of Interest to test thematic fit
Review	Confirm alignment with IFAD Rural Sector Performance Assessment guidance
By 4 Sep 2026	Full proposal only if thematic fit is confirmed
Year 1–2	Pilot health–livelihood indicators in FairBanks / partner rural catchments
Learning	Policy notes for IFAD, national stakeholders, and rural investment planners

8. Indicative resources and counterpart

Item	Detail	Amount
Research & assessment design	Methods, partner contracts, ethics	Share of grant
Community data & FCHIP modules	Indicators, dashboards, data quality	Share of grant
Policy engagement	Briefs, stakeholder dialogues, learning events	Share of grant
FairBanks counterpart	Field ops, CHW supervision, outreach, staff time	20–25% in-kind
Ceiling	Per IFAD call	Up to US\$1.2M

9. Mutual value

FairBanks gains: Resources to connect health intelligence with rural livelihood policy; university partnerships; evidence that prevention protects income and food security.

IFAD gains: Ground-level health and vulnerability data from community programmes; social-enterprise implementer with field access; SDG-aligned health-shock narrative; counterpart contribution via live operations.

10. Expression of interest ask

We will submit an EOI and proceed to full proposal only where official IFAD guidance confirms thematic fit.

Your health, our mission.
