

Nominee Profile — Responsible AI for Community Health

FairBanks Community Health Intelligence Platform (FCHIP)

From Kampala outreach to Cape Town — AI that serves communities first

Your health, our mission.

AI for good means nothing without communities in the loop

My story

I grew up seeing neighbours wait until illness became an emergency. At FairBanks Community Reach I work where care actually starts — in streets, schools, and home visits with Community Health Workers — not only inside a clinic building. That experience shaped why I build: technology should help CHWs see risk early, not add another app nobody uses.

FairBanks Community Health Intelligence Platform (FCHIP) is my answer — responsible AI on top of our community health cascade. We combine offline mobile capture, machine learning, and GIS mapping so fever clusters, high-risk pregnancies, and NCD hotspots surface before they become crises.

FCHIP — responsible AI in practice

- Human-in-the-loop: CHWs and nurses validate alerts — AI supports, never replaces, clinical judgment
- Offline-first design for low-bandwidth communities; no dependency on constant connectivity
- Consent and anonymisation aligned with Uganda Data Protection principles
- Local-language symptom capture where it improves trust and accuracy
- Transparent limits: we publish what models can and cannot do in community settings
- Bias awareness: training data includes women, children, elderly, and urban-poor outreach cohorts

Where AI sits in the FairBanks cascade

Layer	Role
Community members	Identify needs; participate in solutions
CHWs / VHTs	Capture data, educate, refer, follow up
FCHIP intelligence	Predictive alerts, GIS hotspots, decision support
FairBanks Medical Centre	Clinical care, pharmacy, specialist referral
Partners & research	Evidence, scale, policy dialogue

Proof of work

- Live outreach in Bukoto, Kyebando, Kisaasi, Kamwokya, Kikaaya
- Maternal, child, Gericare, and NCD screening programmes generating real field data
- Functioning medical centre anchoring referrals and quality assurance
- CHW/VHT relationships built on trust — essential for ethical AI adoption

Cape Town contribution plan

- Share a practitioner story: how AI can strengthen — not bypass — community health workers
- Join health and technology sessions with examples from Ugandan primary care
- Connect with African innovators using AI for social impact — explore partnerships for FCHIP
- Bring Cape Town conversations back to FairBanks staff, CHWs, and youth volunteers
- Represent responsible AI in health at a summit where marketing hype often drowns out field reality

Ethical commitments

Principle	Practice
Privacy	Household consent; minimum necessary data; secure storage
Equity	Design for users with low digital literacy and basic phones
Accountability	FairBanks clinical team reviews flagged cases
Sustainability	Open documentation so partners can audit and extend

Mutual value

A nominee building AI in real African primary care — with ethics and CHW partnership at the centre.

Your health, our mission.
