Subject: Application for Biomedical Engineer

Dear Hiring Manager,

I am applying for the Biomedical Engineer job at Medequip Healthcare Ltd in Kigali. Your team installs equipment, keeps it running, and trains hospital staff across Rwanda and beyond. That is the work I already do on the ground, and I want to do it with Medequip.

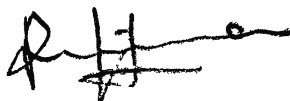

I have over 7 years installing, commissioning, maintaining, and training users on hospital equipment. At Norvik Hospital I serviced diagnostic and monitoring systems. At International Hospital Kampala I spent four years as Biomedical Manager - leading installs of CT, X-ray, oxygen plant, and ICU equipment, running preventive maintenance, training staff, and supporting COHSASA accreditation. I later managed biomedical programmes for the Gould Family Foundation across several facilities.

Since March 2025 I have worked on personal contracts: installing and maintaining equipment for hospitals that call me in. That includes lab, theatre, and radiology jobs in Congo, among them the hospital that serves the Kibali Gold Mine. On the lab side I handle haematology analysers, chemistry analysers, and blood bank machines. I have done this kind of field work in Uganda, Congo, Kenya, Tanzania, and Somaliland - travel to site, fix or install, train users, and leave clear service notes.

I hold a BSc in Biomedical Engineering from Makerere University, but what I bring Medequip is field experience: show up, install or repair, train the team, document the job, and travel when needed. I speak clear English, I am ready to relocate to Kigali, and I am keen to learn your product lines through international training.

My CV is attached. Thank you for your time - I would be glad to talk.

Yours sincerely,

Wasswa Wilson

Biomedical Engineer
