

Africa Health-Tech Accelerator 2026

FairBanks Community Health Intelligence Platform (FCHIP)

From community health signals to timely action across Africa

Your health, our mission.

Application detail	Working position
Deadline	20 July 2026 (extended deadline - recheck before submission)
Headquarters	Uganda
Repo product stage	Pre-MVP / pilot preparation unless a demo exists
Document status	Application draft - FCHIP still appears pre-MVP in repo evidence; identity, commercial, and MVP fields require confirmation

Prepared from the live official programme site and all six sections of the application portal on 19 July 2026.

Submission readiness gate

The portal requires at least two founders and a minimum viable product. The repository confirms strong FairBanks field operations, but current materials describe FCHIP as still being built for pilot. Do not claim MVP stage, paying FCHIP customers, or AI performance without evidence.

- Confirm at least two founders and list every founder with a role.
- Confirm a working FCHIP MVP with a demo or evidence. Repo materials currently describe FCHIP as still being built/piloted, so do not select MVP unless that is no longer true.
- Confirm the presenting founder can attend at least 80% of sessions.
- Replace every CONFIRM BEFORE SUBMISSION field with verified information.
- Upload the pitch deck to a public-access link and test it while signed out.

Critical field	Current status
Founder identity and contacts	CONFIRM BEFORE SUBMISSION
Co-founders and roles	CONFIRM BEFORE SUBMISSION
Working FCHIP MVP evidence	CONFIRM BEFORE SUBMISSION - currently pre-MVP in repo
Revenue and paying customers	CONFIRM BEFORE SUBMISSION
Funding raised and partner list	CONFIRM BEFORE SUBMISSION
Website and public pitch-deck link	CONFIRM BEFORE SUBMISSION

1. Official programme brief

Item	Verified call information
Programme	Six-month pan-African health-tech accelerator
Delivery	Primarily online, with one in-person milestone event
Applicant	Africa-based early-stage health-tech startup or SME
Eligibility	At least two founders; minimum MVP; 80% session commitment
Benefits	Training, one-to-one mentorship, seed-funding opportunity, investor access, Demo Day exposure, and continental visibility
Deadline	20 July 2026 (extended deadline - recheck before submission)

1.1 Strong fit with FCHIP

- Digital health platform with health data and analytics at its core.
- AI-assisted risk insight, used only after validation and clinical oversight.
- Preventive health, remote monitoring, secure EMR/HMS APIs, and supply planning.
- Africa-based product with a clear Uganda-to-East-Africa scale path.
- A live care and outreach environment for real-world product validation.

1.2 Programme journey

Stage	Official programme description
Open call	Application and screening; deadline extended to 20 July 2026
Bootcamp and selection	Intensive virtual bootcamp; up to 50 startups targeted
Accelerator	Weekly sessions, office hours, and Demo Day preparation
Closing event	Pitching, winner announcement, and funding pathway

2. Portal answer bank

Copy only verified answers into the live portal. The wording below is submission-ready where facts are known; orange/red fields require the applicant.

Section 1 of 6 - Startup and founding team

Portal question	Draft answer / action
Startup Name*	FairBanks Community Health Intelligence Platform (FCHIP)
Founder Name*	[CONFIRM BEFORE SUBMISSION]
Founder Gender*	[CONFIRM BEFORE SUBMISSION: Male or Female]
Founder Mobile*	[CONFIRM BEFORE SUBMISSION]
Founder Email*	[CONFIRM BEFORE SUBMISSION]
Founder LinkedIn	[CONFIRM BEFORE SUBMISSION]
Startup Website*	[CONFIRM BEFORE SUBMISSION]
Startup Stage*	[CONFIRM BEFORE SUBMISSION. Repo evidence points to pre-MVP / pilot preparation. Select MVP only if a working product can be demonstrated - the programme requires an MVP.]
Country Headquarter*	Uganda
Primary African office if headquarters is outside Africa	Not applicable

Section 2 of 6 - Startup overview

Portal question	Draft answer / action
What Problem Are You Solving?*	Primary healthcare in underserved African communities is still reactive. Facilities often see people only after illness has worsened, while useful signals from CHW and VHT visits, outreach screenings, maternal care, pharmacy activity, and facility records remain fragmented. Clinical data often stays locked inside existing EMR or hospital management systems, so community and facility intelligence cannot fuse in real time. This delays outbreak detection, high-risk pregnancy referral, NCD follow-up, and medicine planning. Clinics and district teams therefore lack a timely, community-level view of who is at risk, where health threats are growing, and what action should happen next.
What is Your Solution?*	FCHIP is an offline-capable community health intelligence platform. CHWs and VHTs capture structured household and outreach data through mobile tools; approved facility and programme data are synchronized securely; and FCHIP safely exposes authenticated data APIs to existing EMR and HMS systems so clinics can share clinical records into the platform in real time without replacing the software they already use. An analytics layer produces risk flags, GIS hotspot maps, referrals, and dashboards. The first release focuses on three practical use cases: maternal

risk and missed-care alerts, hypertension and diabetes hotspot detection, and community disease surveillance. FairBanks will validate the product in its existing medical centre and Community Reach network before expanding to partner clinics and districts.

Who Are Your Target Customers?*	Private and faith-based clinics, district health offices, NGOs and development programmes, research partners, and health insurers that need better community-level data, follow-up, early warning, and programme monitoring. CHWs and VHTs are the core frontline users.
Startup Innovation Area*	Select: Digital Health Platforms; Health Data & Analytics; Artificial Intelligence in Healthcare; Electronic Health Records; Remote Patient Monitoring; Preventive Health & Wellness Technologies. Add Pharmaceutical Supply Chain Solutions only if medicine forecasting is in the MVP.
Other areas	Community health intelligence and CHW/VHT decision support
What Makes Your Solution Unique?*	FairBanks combines what many health-tech startups and facilities lack: a live medical centre, active outreach programmes, CHW and VHT links, digital health workflows, and a product designed from real community care. This gives FCHIP a direct test environment and a trusted route to users. Secure EMR/HMS data APIs let facilities plug clinical feeds into FCHIP without ripping out existing systems. The platform is not only an electronic register; it closes the loop from community and facility signal to risk insight, referral, targeted outreach, and follow-up.
Which Countries Are You Operating In?*	Uganda
Pitch Deck (upload link)*	[CONFIRM BEFORE SUBMISSION: upload the generated PPT/PDF to Google Drive or another public link; test access while signed out]

Section 3 of 6 - Eligibility screening

Portal question	Draft answer / action
Is your startup based in Africa?*	Yes - Uganda
Does your startup provide a Health-Tech product/service?*	Yes
Co-Founder Names and Roles*	[CONFIRM BEFORE SUBMISSION]
Total Founders (including yourself)*	[CONFIRM BEFORE SUBMISSION: minimum 2]
Can you commit to 80%+ of programme sessions?*	[CONFIRM BEFORE SUBMISSION: select Yes only if true]

Section 4 of 6 - Traction and readiness

Portal question	Draft answer / action
-----------------	-----------------------

Monthly Revenue Range*	[CONFIRM BEFORE SUBMISSION: Less than \$5,000 / \$5,000-\$20,000 / \$20,000-\$50,000 / \$50,000+]
Number of Paying Customers*	[CONFIRM BEFORE SUBMISSION: 0 / 1-10 / 11-50 / 51-200 / 200+]
Fundraising in the next 6 months?*	[CONFIRM BEFORE SUBMISSION: Yes or No]
Raised funding before?*	[CONFIRM BEFORE SUBMISSION: Yes or No]
If yes, amount raised (USD)	[CONFIRM BEFORE SUBMISSION]
Current Partners*	[CONFIRM BEFORE SUBMISSION. Do not count a prospective partner. Portal options: Hospitals/Clinics; Pharma; Insurers; NGOs; Government; Corporates; Universities; None Yet.]
Other Partners	[CONFIRM BEFORE SUBMISSION]
Next 6-Month Milestone*	Recommended if MVP is verified: Validate product-market fit. Otherwise FairBanks is not yet eligible under the stated MVP rule.

Section 5 of 6 - Expected support

Portal question	Draft answer / action
Top 3 Priorities*	1. Validation & Market Research; 2. Product Development (MVP, UX, iteration); 3. Partnerships & Ecosystem Access.
Alternative priority	Replace Product Development with Investment Readiness & Fundraising if the MVP is already stable and validated.

Section 6 of 6 - Final notes

Portal question	Draft answer / action
What is your biggest bottleneck right now?*	Our biggest bottleneck is converting a strong real-world health delivery foundation into a validated, investment-ready product. We need disciplined MVP validation, user testing with CHWs and facility teams, a clear product-market fit case, and partnerships that can support deployment beyond one FairBanks catchment. We also need to strengthen our evidence, data-governance, and fundraising package without overbuilding before the highest-value workflows are proven.
Why do you want to join Africa Health-Tech Accelerator?*	The accelerator directly matches FCHIP's next milestone: validate an Africa-built digital health platform and prepare it for cross-border scale. Mentorship can sharpen our product choices and business model; healthcare and public-sector networks can open credible pilot and integration pathways; and investor-readiness support can turn field evidence into a financeable growth plan. We will contribute a practical Ugandan perspective grounded in community outreach, primary care, CHW and VHT workflows, and the daily realities of underserved urban communities.
How did you hear about the programme?*	[CONFIRM BEFORE SUBMISSION: choose the truthful portal option. Use Other if discovered through an opportunity listing.]

3. Venture narrative

FairBanks outreach provides a real environment for FCHIP product validation.

3.1 Problem

Primary healthcare in underserved African communities is still reactive. Facilities often see people only after illness has worsened, while useful signals from CHW and VHT visits, outreach screenings, maternal care, pharmacy activity, and facility records remain fragmented. Clinical data often stays locked inside existing EMR or hospital management systems, so community and facility intelligence cannot fuse in real time. This delays outbreak detection, high-risk pregnancy referral, NCD follow-up, and medicine planning. Clinics and district teams therefore lack a timely, community-level view of who is at risk, where health threats are growing, and what action should happen next.

3.2 Solution

FCHIP is an offline-capable community health intelligence platform. CHWs and VHTs capture structured household and outreach data through mobile tools; approved facility and programme data are synchronized securely; and FCHIP safely exposes authenticated data APIs to existing EMR and HMS systems so clinics can share clinical records into the platform in real time without replacing the software they already use. An analytics layer produces risk flags, GIS hotspot maps, referrals, and dashboards. The first release focuses on three practical use cases: maternal risk and missed-care alerts, hypertension and diabetes hotspot detection, and community disease surveillance. FairBanks will validate the product in its existing medical centre and Community Reach network before expanding to partner clinics and districts.

3.3 Competitive advantage

FairBanks combines what many health-tech startups and facilities lack: a live medical centre, active outreach programmes, CHW and VHT links, digital health workflows, and a product designed from real community care. This gives FCHIP a direct test environment and a trusted route to users. Secure EMR/HMS data APIs let facilities

plug clinical feeds into FCHIP without ripping out existing systems. The platform is not only an electronic register; it closes the loop from community and facility signal to risk insight, referral, targeted outreach, and follow-up.

4. Product and technology

FCHIP dashboard concept - illustrative, not evidence of a deployed product.

Product layer	Role
Offline mobile capture	Structured CHW/VHT visits, vitals, referrals, and follow-up
Secure EMR/HMS data APIs	Authenticated, consent-aware APIs so existing EMR/HMS systems can share clinical data in real time
Secure data pipeline	Validation, consent, role-based access, and approved integrations
Analytics and AI	Start with interpretable rules; add validated ML as data quality grows
GIS risk layer	Community hotspots, coverage gaps, and outreach priorities
Action dashboard	Alerts, referrals, trends, data quality, and medicine planning

Responsible AI position: begin with simple, explainable rules and clinician review. Add machine-learning models only when the training data, bias checks, monitoring, and clinical validation are adequate.

5. Target customers and business model

Private and faith-based clinics, district health offices, NGOs and development programmes, research partners, and health insurers that need better community-level data, follow-up, early warning, and programme monitoring. CHWs and VHTs are the core frontline users.

Customer	Revenue path
Clinics and hospitals	Subscription plus onboarding and support
Districts and ministries	Deployment, implementation, and analytics contracts
NGOs and programmes	Monitoring, evaluation, workflow, and reporting contracts
Research partners	Ethical study tools and approved anonymised analytics
Digital health partners	Secure EMR/HMS data APIs and other integration services
CHW organisations	Training and implementation support

5.1 Market-entry logic

- Beachhead: FairBanks catchment and Kampala-area outreach workflows.
- First external buyers: clinics and health programmes needing follow-up and reporting.
- Institutional scale: district, NGO, research, insurer, and ministry deployments.
- Regional scale: adapt to countries with established CHW systems and similar care gaps.

6. Traction and honest evidence

FairBanks Community Reach operating model - FCHIP is the intelligence layer.

- Functioning FairBanks Medical Centre with direct access to care workflows.
- Community Reach activity in Bukoto, Kyebando, Kisaasi, Kamwokya, Kikaaya, and nearby areas.
- CHW and VHT links for outreach, referral, follow-up, and community data collection.
- Internal application materials cite 40+ CHWs and VHTs collecting field data weekly (confirm the current number before using it in the portal).
- Existing maternal and child health, Gericare, NCD screening, school, and corporate health work.

- Digital health records and pharmacy workflows that can inform product integration.
- Planned secure EMR/HMS data APIs so existing facility systems can feed clinical data into FCHIP in real time without replacement.
- FCHIP itself remains a planned / pre-MVP build in current repository materials unless newer product evidence is supplied.

These points prove delivery access and validation readiness. They do not by themselves prove FCHIP product traction, paying customers, or model performance. Those claims must be supported separately.

7. Six-month milestone plan

Recommended portal milestone: Validate product-market fit, provided a working MVP already exists.

Timing	Milestone
Month 1	Confirm users, workflows, MVP evidence, governance, and baseline indicators.
Months 2-3	Run CHW/facility usability testing; improve offline capture and dashboards.
Months 3-4	Validate maternal, NCD, and surveillance workflows in FairBanks catchment.
Months 4-5	Test willingness to pay and partnership model with clinics, NGOs, and districts.
Month 6	Publish pilot evidence, investor data room, partnership pipeline, and scale plan.

7.1 Suggested pilot indicators

- CHW/VHT weekly active use and form-completion rate.
- Referral completion and time from risk flag to clinical review.
- Maternal, NCD, and surveillance alerts reviewed and acted upon.
- Data completeness, duplicate rate, and correction time.
- Facility/partner willingness to pay and signed pilot commitments.

8. Accelerator support requested

Priority	Why it matters now
Validation & Market Research	Prove user need, buying pathway, and measurable outcomes.
Product Development	Improve offline UX, workflow fit, dashboards, and secure EMR/HMS APIs.
Partnerships & Ecosystem Access	Secure clinics, districts, programmes, and scale partners.

The accelerator directly matches FCHIP's next milestone: validate an Africa-built digital health platform and prepare it for cross-border scale. Mentorship can sharpen our product choices and business model; healthcare and public-sector networks can open credible pilot and integration pathways; and investor-readiness support can turn field evidence into a financeable growth plan. We will contribute a practical Ugandan perspective grounded in community outreach, primary care, CHW and VHT workflows, and the daily realities of underserved urban communities.

9. Risk and governance

Risk	Mitigation
Eligibility	Confirm two founders and demonstrable MVP before submission.
Data quality	Use simple forms, validation rules, supervision, and data-quality dashboards.
Privacy	Consent, minimisation, role-based access, audit logs, and Uganda compliance; EMR/HMS APIs use authentication and least-privilege scopes.
EMR/HMS friction	Expose stable documented APIs; start with FairBanks systems; do not require replacing existing EMR/HMS.
AI accuracy	Begin with interpretable rules and clinician review; validate before automation.
Adoption	Co-design with CHWs, facilities, districts, and programme partners.
Commercial proof	Test willingness to pay and buying pathways during the pilot.

10. Submission checklist

- [] Recheck the live deadline and portal availability.
- [] Verify the legal/startup name used in the form.
- [] Complete founder identity, contacts, gender, LinkedIn, and website.
- [] List at least one co-founder and verify total founders is two or more.
- [] Attach evidence of a working FCHIP MVP.
- [] Choose only innovation areas included in the current product.
- [] Enter exact revenue, customer, fundraising, and funding figures.
- [] Name only confirmed current partners.
- [] Confirm 80% session attendance and in-person milestone availability.
- [] Upload the pitch deck; enable public link access; test while signed out.
- [] Proofread all answers against this pack and the official portal.
- [] Submit before the deadline and save the confirmation.
